## Building Wire – Declared Article in NSW

On January 29, 2018, NSW Fair Trading changed its declared article list to include Low Voltage Building Wire Cable. This includes single and multicore LV insulated cable up to 5 cores and 16mm<sup>2</sup>, but does not include armoured or metal screened cable.

As a declared article, all relevant cable sold in NSW must be independently certified that it meets the requirements of the relevant Australian Standard (AS/NZS 5000.1 or AS/NZS 5000.2). To indicate that a cable has certification, an 'electrical safety approval mark' is to be printed on the cable.

**All of NAN Australia's LV wholesaler range has been independently certified and is authorised to be marked with the Regulatory Compliance Mark (RCM).** According to NSW Fair Trading, the Regulatory Compliance Mark is an acceptable electrical safety approval mark. Therefore, **NAN Australia is fully compliant with the recent changes in NSW, as well as other electrical safety initiatives around Australia, such as the Electrical Equipment Safety System (EESS).**

### Further Information

More information in relation to NSW declared articles can be found at NSW Fair Trading Website –
